AlphaMind ROUND DETAILS	
Ticker	$BYZAN
Price	$0.03 (vs $0.075 listing price)
Round FDV	$30M (vs $75M listing FDV)
TGE/Listing	November 2026 (planned)
Vesting	20% TGE; 0 cliff; 12-month linear vesting

What they are building

Byzanlink is building infrastructure for issuing, operating and distributing real-world assets onchain. Its two live products cover both sides of the market: BTOS helps institutions tokenise and manage financial products, while RWA Markets packages tokenised strategies into standardised, non-custodial vaults. The result is a full-stack RWA platform rather than a single asset or yield product.

Problem & Solution

Problem: Issuing a token is only one step. Financial products also require eligibility controls, subscriptions, redemptions, reporting, settlement and distribution. Building these systems separately is costly and difficult to scale.

Solution: BTOS combines tokenisation, compliance and lifecycle management; RWA Markets adds ERC-4626 and ERC-7540-style vault distribution. Together, they provide a reusable route from asset issuance to onchain access.

Core Team

Anbu Kannappan, Founder, CEO

Raghul A V
CTO

Rohit Dubey,
Head of BD

Anbu Kannappan — CEO & Founder. 10+ years across enterprise tech and blockchain, with deep expertise in tokenisation and digital asset infrastructure. Previously at Broadridge.
Raghul A V — CTO. 12+ years across Telecom, Auto, and Blockchain (4+ in Web3/DeFi). Expert in regulated RWA tokenisation and cross-chain vault design.
Rohit Dubey — Head of BD. 6+ years across business development and marketing, with deep expertise in partnerships and go-to-market strategy.
Naman Bansal — Head of Marketing. 7+ years in Web3 & Web2 marketing, positioning, GTM, and growth across DeFi, infra, AI, and onchain products.

Backers/Partners

$1M private round backed by Outlier Ventures, NTDP Saudi Arabia, Smart IT Frame, Sensei Capital & strategic angels. Ecosystem development includes a strategic collaboration with the Hedera Foundation; this is presented as ecosystem support, not as an investment claim.

Traction

- $10M+ in tokenised assets and five institutional deployments/pilots reported.
- Approximately $1.16M RWA Markets TVL tracked by DeFiLlama as of 12 August 2026.
- 23K+ users and 300K+ transactions reported across the ecosystem.
- BTOS is live, with deployments announced on Ethereum and Robinhood Chain.

Token Utility

- **Staking**: lock $BYZAN for stBYZAN, governance weight and ecosystem rewards.
- **Product access**: unlock selected vaults, launches and enhanced participation tiers.
- **Governance and Pulse**: influence treasury, incentives and integrations; the planned Pulse framework rewards sustained product participation.
- **Value accrual**: subject to revenue and governance approval, platform fees may fund transparent buybacks for ecosystem allocation or burning.

Competitive Edge

- Full-stack model: issuance and lifecycle management through BTOS; distribution through RWA Markets.
- Live before TGE: working products, onchain TVL and early institutional deployments.
- Multi-asset infrastructure: built for funds, credit, treasuries and structured products.
- Institutional fit: compliance controls, reporting, modular APIs and standardised vaults.

Alphamind Analysis

Byzanlink targets the operating bottleneck behind RWA adoption, not merely token issuance. Live products, independently visible TVL and initial institutional deployments give the thesis more substance than a concept-stage RWA project. Its two-product structure creates a credible flywheel: BTOS can onboard issuers and assets, while RWA Markets expands their distribution and platform activity.

The AlphaMind round enters at a $30M FDV, 60% below the planned $75M listing FDV, with 20% at TGE and the balance vesting over 12 months. A fixed 1B supply and long-dated insider vesting support post-launch alignment. If deployments convert into recurring fees and product activity creates genuine $BYZAN demand, Byzanlink could become a picks-and-shovels layer for onchain capital markets. The planned listing price is not guaranteed.

Risks & Opportunities

Opportunities:
Institutional tokenisation increasingly needs reusable issuance, compliance and vault infrastructure. Byzanlink serves both product creation and distribution, while each new issuer or strategy can expand platform utility. AlphaMind participants enter materially below the planned listing valuation.

Risks:
TVL and institutional adoption remain early. Enterprise sales cycles are long, RWA products face regulatory and liquidity constraints, and most $BYZAN utility is not yet live. Actual TGE pricing, listing and liquidity may differ from current plans.
